Abstract and Figures This thesis proposes an optimal and single protection scheme suitable for all operating modes of microgrid along with every type of phase fault in the system.

Microgrid protection encompasses key elements such as advanced fault detection, adaptive relaying, and coordination schemes to address dynamic fault conditions.

The Relay block comprises two protection units, phase protection and earth protection. The phase protection unit protects the microgrid from high phase currents.

Such behavior impacts the overcurrent relays and makes the protection coordination difficult. This paper introduces a novel adaptive protection system that includes two phases to handle
