The clonoSEQ Assay B-cell Reagent Set is an in vitro diagnostic that identifies and quantifies rearranged B-cell receptor gene sequences in DNA extracted from blood and bone marrow.

clonoSEQ is a blood or bone marrow test 1 that measures your cancer at the deepest level currently available 1-3, helping your doctor make more informed decisions about your care. clonoSEQ is FDA

Detect subtle changes in disease dynamics by monitoring MRD status. Use clonoSEQ to detect small but significant levels of residual disease.

Ordering clonoSEQ We're here to guide you through the ordering process The clonoSEQ testing service offers helpful support to make your experience seamless.

clonoSEQ ® Assay is a highly sensitive, specific, and standardized method for detecting and monitoring MRD, in B-cell lymphoid malignancies. MRD refers to the small number of cancer cells that can

The clonoSEQ ® Assay is powered by next-generation sequencing (NGS) technology and differentiated from other NGS assays by groundbreaking advances in chemistry and proprietary bioinformatics.

Download the Full Technical Summary This page is intended for a US-based audience. clonoSEQ® is available as an FDA-cleared in vitro diagnostic (IVD) test service provided by Adaptive

clonoSEQ MRD Monitoring clonoSEQ is a highly sensitive, specific, and standardized method for detecting and monitoring MRD, or measurable residual disease, in lymphoid cancers.

clonoSEQ tracks MRD in multiple myeloma, DLBCL, CLL, and B-ALL.

clonoSEQ is a measurable residual disease (MRD) test that detects, quantifies, and assesses the small number of cancer cells that may remain in a patient's body during and after treatment.¹ Use
