The theorem that  $\binom{n}{k} = \frac{n!}{k!(n-k)!}$  already assumes  $0! = 1$  is defined to be  $1!$ . Otherwise this would be restricted to  $0 < k < n$ . A reason that we do define  $0!$  to be  $1!$  is so that

Does anyone know how to justify or prove that the statement "ridge estimators of regression coefficients are always unbiased" is false? That was my first question,

Interactive world weather map by Worldweatheronline with temperature, precipitation, cloudiness, wind. Animated hourly and daily weather forecasts on map

Although I'm not anything remotely close to an expert (quite the opposite really), it seems to me that the standard reference for the kind of things you're looking for is the book Markov

The main criteria is that it be asked in bad faith. ;-). I'm not entirely insincere: The question is rather how can we tell that, and a big part of the answer is "context"; it's not mainly the

What's the difference between Fourier transformations and Fourier Series? Are they the same, where a transformation is just used when its applied (i.e. not used in pure mathematics)?

António Manuel Martins claims (@44:41 of his lecture "Fonseca on Signs") that the origin of what is now called the correspondence theory of truth, Veritas est

As an example, I downloaded some GPS data from my camera the other day in which I found numbers like

\$4215.983.\$ This turned out to represent \$42\$ degrees and \$15.983\$

What I would say is that you can multiply any non-zero number by infinity and get either infinity or negative infinity as long as it isn't used in any mathematical proof. Because multiplying by infinity is

Even after updating the original post there remain at least two different questions: How does morality relate to duty and inclination according to Kant? Kant's Groundwork for the

In general, people don't confuse the means with the ends. Instead, what happens is that people get so wrapped up in the means that they fail to see that the means aren't accomplishing
